David,

Here is the latest Executive Summary for San Jacinto.

The sediment sampling results are shown on the attached figure 3:

- Cap Repaired Area: before repair samples 8,180 ppt to 43,700 ppt (waste is from pits based on "fingerprint" – Figure 4 – dominated by tetra dioxin/furan).
- EPA Split: 34,000 ppt - consistent.
- Adjacent sediment on cap: samples 145 ppt, 32.2 ppt & 29.9 ppt (background material based on "fingerprint" – Figure 5 – dominated by octa dioxin/furan).
- EPA splits 130 ppt & 54 ppt - consistent.

So, summary –

- Before repair found high level paper mill dioxin material present in the small compromised area.
- Repair covered compromised area.
- Adjacent areas only contained background type dioxins in sediment.

Next Steps:

- install six video cameras with 24/7 monitoring for cap surveillance.
- Install additional buoys around cap.
- PRPs perform complete underwater cap inspection with EPA Dive Team oversight.
- Upgrade inspection protocols based on Corps of Engineers assessment.
- Additional cap & sediment sampling planned.

I am traveling but I want to see the information prior to release. Is the meeting still on for next week? I thought it was rescheduled to a later date.

David, do you still want to meet with us sometime this week, to finalize Messaging for next week's community activities to share new information.

Thanks,
